EXAMINER'S AMENDMENT/COMMENT

Reasons for Allowance

Applicant's argument that the prior art adjustment is made after measuring ink drop mass on the basis of measured heater resistances, and that the adjustment is not made based on results from executing a plurality of ink droplet ejections from the nozzle orifice while varying an ejecting time, as required has been persuaded. Examiner also agrees that the equivalency doctrine established by the Examiner is not supported the "ranking" as claimed, as Anderson's "optimization" is directed to the establishment of a single optimal offset value for each parameter, rather than a plurality of states and parameters associated to "ranking". Therefore, rejection is hereby withdrawn.
